TI Human **herpesvirus 8** encodes a homolog of **interleukin-6**

SO Journal of Virology (1997), 71(1), 839-842

CODEN: JOVIAM; ISSN: 0022-538X

AU Neipel, Frank; Albrecht, Jens-Christian; Ensser, Armin; Huang, Yao-Qi; Li, Jian Jun; Friedman-Kien, Alvin E.; **Fleckenstein, Bernhard**

AB Kaposi's sarcoma is a multifocal lesion that is reported to be greatly influenced by cytokines such as **interleukin-6** (**IL-6**) and oncostatin M. DNA sequences of a novel human gammaherpesvirus, termed human **herpesvirus 8** (**HHV-8**) or Kaposi sarcoma-assocd. **herpesvirus**, have been identified in all epidemiol. forms of Kaposi's sarcoma with high frequency. The presence of **HHV-8** DNA is also clearly assocd. with certain B-cell lymphomas (body cavity-based lymphomas) and multicentric Castleman's disease. Sequence anal. of a 17-kb fragment revealed that adjacent to a block of conserved **herpesvirus** genes (major DNA-binding protein, glycoprotein B, and DNA polymerase), the genome of **HHV-8** encodes structural homolog of **IL-6**. This cytokine is involved not only in the pathogenesis of Kaposi's sarcoma but also in certain B-cell lymphomas and multicentric Castleman's disease. The viral counterpart of **IL-6** (**vIL-6**) has conserved important features such as cysteine residues involved in disulfide bridging or an amino-terminal signal peptide. Most notably, the region known to be involved in receptor binding is highly conserved in **vIL-6**. This conservation of essential features and the remarkable overlap between diseases assocd. with **HIV-8** and diseases assocd. with **IL-6** dysregulation clearly suggest that **vIL-6** is involved in **HHV-8** pathogenesis.

TI Human **herpesvirus type 8 interleukin-6** homolog is functionally active on human myeloma cells

SO Blood (1998), 91(6), 1858-1863

CODEN: BLOOAW; ISSN: 0006-4971

AU Burger, Renate; Neipel, Frank; **Fleckenstein, Bernhard**; Savino, Rocco; Ciliberto, Gennaro; Kalden, Joachim R.; Gramatzki, Martin

AB Seroepidemiol. and polymerase chain reaction studies have strongly suggested that human **herpesvirus type 8** (**HHV-8**)

) is assocd. with Kaposi's sarcoma, Castleman's disease, and body cavity-based lymphoma. The genome of HHV-8 harbors a viral analog of the interleukin-6 (IL-6) gene. The amino acid sequence of the viral IL-6 (vIL-6) protein is 24.7% identical to human IL-6 (hIL-6). IL-6 as a B-cell growth and differentiation factor is known to play an essential role in the pathophysiol. of B-cell tumors. Thus, it seems possible that virus-encoded IL-6 contributes to malignant growth of HHV-8-pos. B-cell lymphatic tumors. We have tested a prepn. of HHV-8-derived IL-6 for the ability to promote the proliferation of the human myeloma cell line INA-6, which is strictly dependent on exogenous IL-6 for growth and survival. Viral IL-6 significantly induced DNA synthesis of INA-6 cells, but required much more protein on a wt. basis when compared with hIL-6 for maximal proliferation. The proliferative effect of vIL-6 was almost completely inhibited by a combination of anti-IL-6 receptor (IL-6R) and anti-gp130 antibodies or IL-6R superantagonist Sant7 and anti-gp130 antibodies. This report demonstrates that vIL-6 has proliferative activity on human cells and that the IL-6R and gp130 are involved in vIL-6 signaling in the myeloma cell line INA-6.

TI The interleukin 6 of human herpesvirus 8 and its use in diagnostics and therapeutics

SO PCT Int. Appl., 19 pp.

CODEN: PIXXD2

IN Fleckenstein, Bernhard; Albrecht, Jens-Christian; Neipel, Frank; Friedman-Kien, Alvin; Huang, Yao-Qi

AB Human herpesvirus 8 is found to carry a gene for an interleukin 6 that can bind to the interleukin 6 receptor. The interleukin and the gene encoding can be used in the diagnosis and treatment of a no. of diseases including: Kaposi sarcoma, Castleman's disease, multiple myeloma, kidney cell carcinoma, mesangial proliferative glomerulonephritis or B cell lymphoma. The protein may be manufd. by expression of the cloned gene.
